M A T E R I A L S

Acrilan, as a leader manufacturer of acrylic bathtubs, combines the science knowledge with the multiannual experience and the modern technology, and is distinguished for the reliability and quality of its products. Through this end-less effort we present to you the new reinforcement technique of Maxx Coat, which guarantees:

- complete rigidity
- excellent strength
- durability
- thermal insulation
- sound insulation
- temperature maintenance for a longer time period
- long life brightness
- immutable stability during time
- moisture resistance
- waterproofness

Available for certain models.

ACRYLIC SHEET

ACRILAN attaches great importance to the material of the manufactured products. The cast acrylic (specifically engineered for sanitary products) is the most suitable material for the construction of jetted tubs. It is non-toxic, soundproof and heat insulating, it keeps the temperature of the water for a longer time than any other material through its insulating properties. It is durable, with a pleasant texture and smooth surface. Easy to clean, maintains gloss, while preventing the concentration of bacteria because it is very compact and similar to glass. But the most important material is the love of our people for creativity and their work. Our company has specialized in the potential well trained executives, experienced, distinguished for their dedication, creativity and team spirit. They share the vision & mission of the company and participate effectively in meeting the high goals.

ACRILAN uses acrylic sheet, which covers all the standards and requirements set by the EU. The European Regulation Standards, applying the standards EN263 and EN198, determines the properties required of cast acrylic sheets for the manufacture of shower and tub, as well as finished products for sale. The structure of the color, thickness, stiffness, no absorption, the resistance to impact, the hot water and the cleaning products are some of the properties listed and required in the above specifications.

ACRILAN uses acrylic sheets made by Lucite, which is the world leader in the design, development and manufacture of acrylic sheets. Over 50% of acrylic bathtubs worldwide are constructed of Lucite acrylic sheets.

FIBER SCULPTURE

We love curves

Design out of the box

Unique ideas made possible

Lets design forward

A vision made real

Fiberglass resin is a common type of fiber - reinforced plating using glass fiber. Fiberglass resins are used for many different purposes. The excellent adhesive properties and durability of the fiberglass resins make them an extremely useful construction material, that can make possible almost any creative idea.

Please feel free to send us your designs and our company staff will do its best to implement them.
